Housing length	LB ±0.15	112,5 (152,5)	140 (180)	167,5 (207,5)	195 (235)	222,5 (262,5)	250 (290)
Alignment rotor/housing	P ± 0.2	47 (87)	47 (87)	47 (87)	47 (87)	47(87)	47 (87)
Maximum rotoric contact diameter	Pmax	666	666	666	666	666	666
Rotor length	R+0.15	27,5	55	82,5	110	137,5	165

INTEGRATION:

- ✓ The cables are made of PU, class 6, foreseen for cable-bearing chains, 2mt standard length, copper square section according rated current.
- ✓ Rotor/housing alignment (P) has to be executed within ±0,1mm. Optionally, we can supply a mounting tool for achieving that alignment in case of assembly without the possibility of accurate alignment.
- ✓ Thermal device cables consist of a shielded pairs of 2x2x0.25mm² section, 7mm external diameter.
- ✓ (DE) represents :
 - 1- The maximum diameter passing inside the housing.
 - 2-The maximum diameter necessary for rotor assembly.
- ✓ (Pmax) diameter for pieces in contact with the rotor must never be exceeded.
- ✓ Tapped holes on each side of rotor and housing are angularly aligned.
- ✓ Cable positioning (AF) is theoretical. Leave a free room with ±10 arc degree tolerance around that position, on a 50mm height from the housing side, for avoiding to force the cables at the alternator output..
- ✓ When designing the assembly, take care to insure a perfect contact between housing and user's bore for avoiding thermal problems.
- ✓ For housing mounting, use either external (B) or internal (A) centering diameter.
- ✓ For execution tolerances (perpendicularity, concentricity, ...) please contact us.
- ✓ In **red** in the table, P, LB, are 30mm higher when the rated current is greater than 38amps for class 6 shielded cables output.
- ✓ We also propose an output with unshielded wires that is not requiring an increase of length (contact us for square section)

- ✓ A full integration handbook can be supplied to our customer upon request.
- ✓ For further information or specific request about our alternators, feel free to contact us.
